Donnelly, S.

Direct Submission

Submitted (27-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire, CE10 15A, UK. E-mail enquiries: hunquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On or before May 15, 2001 this sequence version replaced
gi:958163, gi:1218084.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations where differences are found these are annotated as variations where differences are found these are annotated as variations or version to be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following aboreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw; SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP thtps://www.sanger.ac.uk/Projects/C\_elegans/wormpep This sequence and how part of bacterial clone contigs of human chromesome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrI
RPII-131L23 is from the library RRCI:11.1 constructed by the group of Pieter de Jong. For further details see the brite is and the sequence of the second of pieter de Jong. For further details see the brite is and the sequence of the proper is and the prive in the resone of the property of pieter de Jong. For further information can be found at the pieter de Jong. For further details see AL360219 168953 bp DNA linear PRI 27-FEB-2001 Human DNA sequence from clone RP11-131L23 on chromosome 1, complete IMPORTANT: This sequence is not the entire insert of clone RP11-131L23 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP11-131L23 is at 168953 in this sequence. The true left end of clone RP4-611J7 is at 37497 in this sequence. The true left end of clone RP11-290MS is at 104198 in this sequence. The true right end of clone RP4-621F18 is at 100 in this sequence. The true right end of clone RP4-621F18 is at 140647 in this sequence. 203 ACGAGAGCCTTCCGGACTGCGTCTTCGTGGAGGACGTGGCCGTGGTGTGCGAGGAGACGG 262 Eukaryora; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 168953) 142777 CCTCATCACCCGGACCCGGGCGCGCGGAGGAAGGT 142819 263 CCCTCATCACCCGACCCGGCGCCGAGCCGGAGGAAGGAGGT 305 Location/Qualifiers 1. .168953 sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                             à
                                                                                                                                                                                              This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chrl
RRP4-621F18 is from the library RPCI-4 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    18612 AdATCATGCAACAGATGAGGTGACCACGCTACGACAACTCACTGTGGCCTGATGACATAG 18553

IG

Novel methylarginase polypeptides and polynucleotides, used to identify modulators of them, which are used in the treatment of e.g. cancer, hypertension, and bacterial infections. WPI; 2000-543392/49. P-PSDB; AAB01477. XXXXXXXXXXXXXXX

Claim 1; Page 55-56; 68pp; English

Nucleotides encoding methylarginase polypeptides, vectors comprising these mucleotides and the polypeptides themselves can be used in medicaments for the treatment of hyperlipidemia, renal failure, hypertension, restencists after angioplasty, atherosclerosis, complications of heart failure, schizophrenia, multiple sclerosis or cancer. Modulators of the enzyme can be used in medicaments for the treatment of ischemia-repetfusion injury of the brain or heart, cancer, lethal hypertension in severe inflammatory conditions such as septic shock or multiple. The failure, or local and systemic inflammatory disorders including arthritis, skin disorders, inflammatory cardiac disease, migraine, or microbial or bacterial infection

WO2003089638-A1.

30-OCT-2003

The invention relates to a variant dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADE71464) and a nucleic acid encoding it (ADE71463). DDAHs regulate the metabolism of ADMA (asymmetrical in the ADE71463). DDAHs regulate the metabolism of ADMA (asymmetrical dimethylarginine; a naturally occurring nitric oxide synthase inhibitor) and nitric oxide, which are relevant in disorders such as cardiovascular disease and diabetes. The DDAH 1 gene is located on chromosome 1, which as been implicated in susceptibility to diseases such as familial combined hyperlipidaemia, premature coronary artery disease (CAD), non insulin-dependent (type 2) diabetes mellitus, and diastolic hypertension. The variant DDAH 1 of the invention ASS Met at position 67, rather than Thr. which is caused by a C to T change in exon 1 at a position or corresponding to base 260 in ADE71463 and ADE71465 individuals heterotor homozygous for the Thr87Met allele have an increased risk of developing cardiovascular diseases and diabetes. The invention also relates to a DDAH 1 cDNA capture probe; a method and kit for diagnosing a

The invention relates to genes and their expression profiles are used for:

(a) screening modulators of precursor stem cell differentiation into esteoblasts, or bone tissue, deposition, (b) diagnosing abnormal costeoblasts, or bone tissue, abnormal rate of osteoblast formation or steoporosis; or (c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition. Specific conditions include postmenopausal osteoporosis, glucocorticoid osteoporosis or male osteoporosis, osteopenia, osteodystrophy, druginduced abnormalities in bone formation or bone loss, conditions that involve alterated bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastocytosis, Fanconi syndrome or fibrous dysplasia. The present sequence is that of an osteoblast differentiation associated cDNA marker of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression profiles are used

```
The invention relates to a secretory polynucleotide (designated sptm)

comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

naturally occurring polynucleotide sequence at least 90 % identical to

the polynucleotide sequence, a polynucleotide complementary to them or an

EXA equivalent of them. The polynucleotide complementary to them or an

EXA equivalent of them. The polynucleotide are useful for

EXA equivalent of them. The polynucleotide are useful for

the expression of functional SPTM. These are particularly useful for

diagnosing, treating or preventing autoimmune/inflammatory disorders

(e.g. acquired immunodefliciency syndrome, anaemia, asthma or Crohn's

disease), neurological disorders (e.g. epilepsy, Huntington's disease,

dementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,

complicible selectosis, ocerebral palsy, Parkinson's disease,

comprised, polycythemia vera, or cancers including adenocarcinoma,

schizophrenia or ammesia), or call proliferative disorders (e.g.

leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,

conferent, or part of the printed specification, but was obtained in electronic

format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                               New human secretory proteins and polynucleotides, useful for diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. AIDS), neurological disorders (e.g. Alzheimer's), or cell proliferations or

New drug metabolizing enzymes (DME) useful for diagnosing, treating and preventing diseases or conditions associated with aberrant DME expression, e.g. cancer, AIDS, atherosclerosis, diabetes, glaucoma, hepatitis, osteoporosis.

Claim 5; Page 164-165; 166pp; English

The invention relates to an isolated polypeptide comprising 12 fully defined sequences of 81-615 amino acids given in the specification; a naturally occurring amino acids squence at least 90% identical to, having 81-599 amino acids, at least 93% identical to a sequence of 529 amino acids, at least 93% identical to a sequence of 615 amino acids, all contains the specification; or a biologically active or immunogenic fragment of the polypeptide. The polypeptides and polymolocotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of a drug metabolising enzyme (DME), such as autoimmune/inflammatory (e.g. AIDS, atherosolerosis, contact dermatitis) cell-proliferative (e.g. cancer, cirrhosis), developmental (e.g. dwarfism, hypothyroidism), endocrine (e.g. osseoporosis, thrombosis, dabetes), eye (e.g. glaucoma, correspondentis), metabolic (e.g. dwarfism, hypothyroidism), endocrine (e.g. osseoporosis, thrombosis, dabetes), eye (e.g. glaucoma, correspondentis), metabolic (e.g. dwarfism, hypothyroidism), endocrine (e.g. osseoporosis, thrombosis, dabetes), eye (e.g. glaucoma, corrective, decreased of exogenous compounds on the expression of nucleic acid and amino acid sequences of DME. The DME or its fragments are useful in assessing controlled compounds for effectiveness as agonist or antagonist of the polymolectide and compounds that specifically bind to or modulate the activity of the polymolectides of the invention can be used in gene profiles. The polymolectides of the invention can be used in gene corrections, contagorine the represents the DNA encoding a drug metabolising enzyme of the invention

The invention relates to a variant dimethylarginine dimethylaminohydrolase-1 (DDAH 1; ADE71464) and a nucleic acid encoding confinethyl-arginine; a natually occurring nitric oxide symmetrical dimethyl-arginine; a natually cocurring nitric oxide symmetrical dimethyl-arginine; a natually cocurring nitric oxide symmetrical dimethyl-arginine; a natually gene is located on chromosome 1, which has been implicated in susceptibility to disease such as familial combined hyperlipladamia, premature coronary artery disease (CAD) non condined hyperlipladamia, premature coronary artery disease (CAD) non combined hyperlipladamia, premature coronary artery disease (CAD) non corresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding to base 260 in ADE71463 and ADE71465. Individuals heterocorresponding the DDAH genotype, a method of treating diabetes or susceptibility to a cardiovascular disease and diabetes in a hypertensive vascular complications of diabetes and by Production or metabolism; and the ADE41 genotype and treating diabetes or treating cardiovascular disease (a.g., coronary heart disease, corpused by determining which carries a human variant DDAH inucleic acid complications. The methods are useful for determining whether a dual which reduces DDAH accontration, or metabolism; administry or concentration, orn an agent which electes DDAH and administry by concentration, (such as DDAH agonist). The methods are useful for determining whether a patient by electrimining whether a patient by the present sequence. Whete
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

The present invention describes a method for determining whether a compound induces a toxic effect on a tissue or cell. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to nucleotide sequences which are useful the screening of compounds for the treatment of pain, or for the diagnosis of pain. The nucleotide sequences are up-regulated in the spinal cord in response to streptozocin-induced diabetes. The present sequence is one such nucleotide sequence.

The invention relates to a combination comprising a number of cDNAs expressed in prostate cancer. The invention also relates to a method for detecting differential expression of one or more cDNAs in a sample containing nucleic acids by hybridising a substrate with the nucleic acids, thus forming one or more hybridisation complexes, detecting hybridisation complexes, formation and comparing the complexes formed with standard complexes, where differences between the standard and the sample complex formation indicate differential expression of cDNAs in the sample to proteate sample invention also relates to proteate cancer. The combination is useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. The for detecting prostate cancer. The antibodies are useful for diagnosing, treating or monitoring the for detecting prostate cancer. This sequence represents a human prostate cancer. This sequence represents a human prostate Human; prostate cancer; ss; cDNA combination; differential expression; New combination comprising cDNAs that are differentially expressed in prostate cancer, useful for diagnosing, treating or monitoring the progression of treatment of prostate cancer. Prostate cancer associated gene sequences, referred to as prostate cand antigens, useful for treatment, prevention, and diagnosis of disorders such as prostate cancer.

Claim 1; Page 976-977; 2338pp; English.

AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities,

and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases. AAF16506 to AAF16514 to AAB57303 represent sequences used in the exemplification of the present 888888888888888

New isolated nucleic acid molecules that are associated with ileitis, for preventing, treating, modulating and diagnosing ileitis in a mammalian subject

Claim 1; Page 212-213; 273pp; English

The invention relates to a novel isolated nucleic acid molecule comprising a polynucleotide having one of 90 polynucleotide sequences, given in the specification. The polynucleotides of the invention have antiinflammatory activity, and may have a use in gene therapy. The polynucleotide or a polypeptide encoded by it is used for preventing, treating, modulating or ameliorating a medical condition such as ileitis. The polypeptide or polynucleotide is also useful for manufacturing a medicament for treating ileitis. The sequence represents a condition as sequence tag obtained from a mouse clone by the TOGA (total gene expression analysis) method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            798
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel polypeptides and their encoding nucleic acids derived from human pancreatic tumor tissue which have cytostatic activity. The sequences are also useful in producing pharmaceutical compositions for treatment of pancreatic tumors. AAZ528S8-Z53014 represent expressed sequence tag (SZT) fragments derived from a human pancreatic tumor cDNA library and which encode the proteins represented

The present sequence is the human hydrolase protein-2 (HYDRL-2) encoding CDNA, identified in Incyte clone 94738, derived from the PANCNOTOS clibrary. It is expressed in reproductive, gastrointestinal, nervous, and cardiovascular tissues. This sequence maps to chromosome 6 within the interval from 42.30 to 45.40 centimorgans (CM), to chromosome 9 within the interval from 130.40 to 165.50 cM, and to chromosome 9 within the interval from 81.00 to 92.60 cM. HYDRL antibodies, agonists and antagonists are useful for diagnosis, treatment and prevention of disorders associated with altered expression or activity of HYDRL. It includes cell proliferative disorder such as cancer, autoimmune or inflammatory disorders such as inflammation, AIDS, neurological disorder cuch as epilepsy, stroke, renal disorder such as medullary sponge kidney, adrenal disorder such as adrenolaucodystrophy. The hubleocide sequences are useful for detecting and quantifying gene expression in tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human hydrolase protein useful for diagnosing, treating and preventing cell proliferative, autoimmune and inflammatory, neurological, renal, adrenal and genetic disorders.
                                                                                                                                                         antinflammatory, neuroprotective, cerebroprotective, anticonvulsant, nephrotropic, antibody, agonist, antagonist, diagnosis, treatment, prevention, cell proliferative disorder, cancer, inflammation, AIDS, Acquired Immune Deficiency Syndrome, autoimmune,inflammatory disorder, neurological disorder; epilepsy, stroke, medullary sponge kidney, renal disorder; adrenal disorder; adrenoleucodystrophy; ss.

/clone="DYGan: Drain; Vector: pYX-Asc; Site 1: EcoR I;
Site 2: Not I; The library was constructed according to
Bonaldo, Lennon and Soares, Ganome Research, 6:791-806,
1996. Denatured mRNa was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with an
oligo-dT primer containing a Not I site. Double stranded
cDNA was size selected according to mRNA size fraction,
ligated with EcoR I adaptor, digested with Not I, and then
cloned directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA
tail, is GTGCGTGGAA. This library was created for the
University of Iowa Mouse Brain Molecular Anatomy Project
(BMAP): 'Gene Discovery in the Developing Mouse Nervous
System', supported by National Institutes of Mental Health
(NIMH), Hemin Chin, Ph.D., program coordinator."

First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pIT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CATCTCTACT. This library was created for the University of Iowa Program for Rat Gene Discovery and Mapping (Val Sheffield, Bento Soares	Query Match   63.8%; Score 547.8; DB 14; Length 760;	Oy 324 ATTAGAAAACTTCAGCTCAATATAGTAGAGATGAAAATGCAACTTTAGATGG 383  Db 121 TTTGGAAAAACTTCAGCTCAACATAGTAGAGATGAAAATGCAACTTTAGATGG 383  Oy 384 CGGAGATGTTTATTCACAGGCAGAGAATTTTTTGTGGGCCTTTCCAAAAGGACAAATCA 443	301 GGCCGATTCTTTGCATTTAAAGAGTTTCTGCAGCCTGGCCCCAACCTGATCGCAAT  564 TGGGTCTAGTGAATCTGCACAGAAGGCCCTTAAGATCTGCAACAGATGCAATCGCAAT  564 TGGGTCTAGTGAATCTGCACAGAAGGCCCTTAAGATCATGCAACAGATGAGTGACCACCG  624 TGGGTCAAGAGATCTGCGCAGAAGGCCTCAAGATCATGAACAGATGAGTGACCACCG  624 CTACGACAAACTCACTGTGCCTGATGAACAGAACAGTAATATTCTAAATATCCC  625 TTATGACAAAGCTCACTGTACCGGACGACAGACAGTAATATTAAATATCCC  626 TAATGACAAGCTCACTGTACCGGACGACGGCCGCCAACTGTATATATA

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001) cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to

prepare mouse tissues.

RAA was provided by Dr. Akira Nakagawara (Div. of Biochemistry, RhA was provided by Dr. Akira Natitute, 666-2 Nitona, Chuoh-ku, Chiba, 260-8717 Japan) whose assistance is gratefully acknowledged. Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

/clone lab="NIH BMAP FIO"
/clone="Organ: Brain, Vector: pxx- Asc; Site 1: EcoR I;
Site 2: Not I; The library was constructed according.
Bonaldo, Lennon and Scares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcse
gel.Pirst strand cDNA synthesis was primed with Oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoX I adaptor, digested with NotI and then cloned
directionally into pxx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CAGCAGAGC. This library was created for the University
lowa Brain Anatomy Project (BNAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
